shape when an accident occurs, for preventing the occupant from sliding out from a lower area of the seat belt apparatus.

Regarding independent claim 5, the prior art of record fails to show a vehicle seat belt apparatus including a seat belt portion attached in tension without being in contact with a body of an occupant; and an auxiliary air bag mounted to one of the seat belt portion and a belt latch portion, the auxiliary air bag is capable of being expanded when one of an accident and an expansion of another air bag occurs, for preventing the occupant from sliding out from a lower area of the seat belt apparatus.

Regarding independent claim 9, the prior art of record fails to show a vehicle seat belt apparatus including a seat belt portion, which is adapted to run across an occupant's body attached in tension and adapted not to contact with the body of the occupant, thereby removing a pressure feeling applied by a conventional shoulder belt; and prevention means for preventing a submarine phenomenon, wherein an occupant slides out from a lower area of the conventional belt when an accident occurs, provided in the seat belt portion.
